Project Name	Streamlining IT Procurement automating laptop orders with flow designer		

Ideation Phase — Define the Problem Statements

Customer Problem

Customer's Point of View & Operational Difficulties:
From the customer's perspective, ordering a work laptop is currently a slow, fragmented, and opaque process. Employees, new hires, and department managers face severe friction due to manual email approvals, lack of real-time status updates, repetitive data entry across disconnected systems, and delayed order fulfillments that directly impact workplace productivity and onboarding experiences.

I am	**I'm trying to**	**But**	**Because**	**Which makes me feel**
Describe customer & key characteristics	List their desired goal/outcome	Describe problems or barriers in the way	Root cause of why the barrier exists	Customer's emotional perspective

Template Framework Example:

Customer Problem Statements:

Problem Statement (PS)	I am (Customer)	I'm trying to	But	Because	Which makes me feel
PS-1	A newly hired remote employee waiting for hardware.	Order my corporate laptop and start onboarding on my first day.	My laptop delivery is delayed by over two weeks after my start date.	Request processing is handled manually via email threads without automated approval flow.	**Anxious & Blocked**
PS-2	An IT Operations Manager handling staff requests.	Efficiently approve and track laptop procurement orders across departments.	I spend hours re-entering order data across spreadsheets and vendor portals.	Service Catalog and procurement vendor systems are not integrated with automated workflows.	**Overwhelmed**
PS-3	A Department Head managing hardware budgets.	Track real-time IT procurement expenses and request approvals.	I have zero visibility into where laptop orders are stuck in the approval chain.	There is no centralized Flow Designer dashboard or live tracking for requests.	**Dissatisfied**
